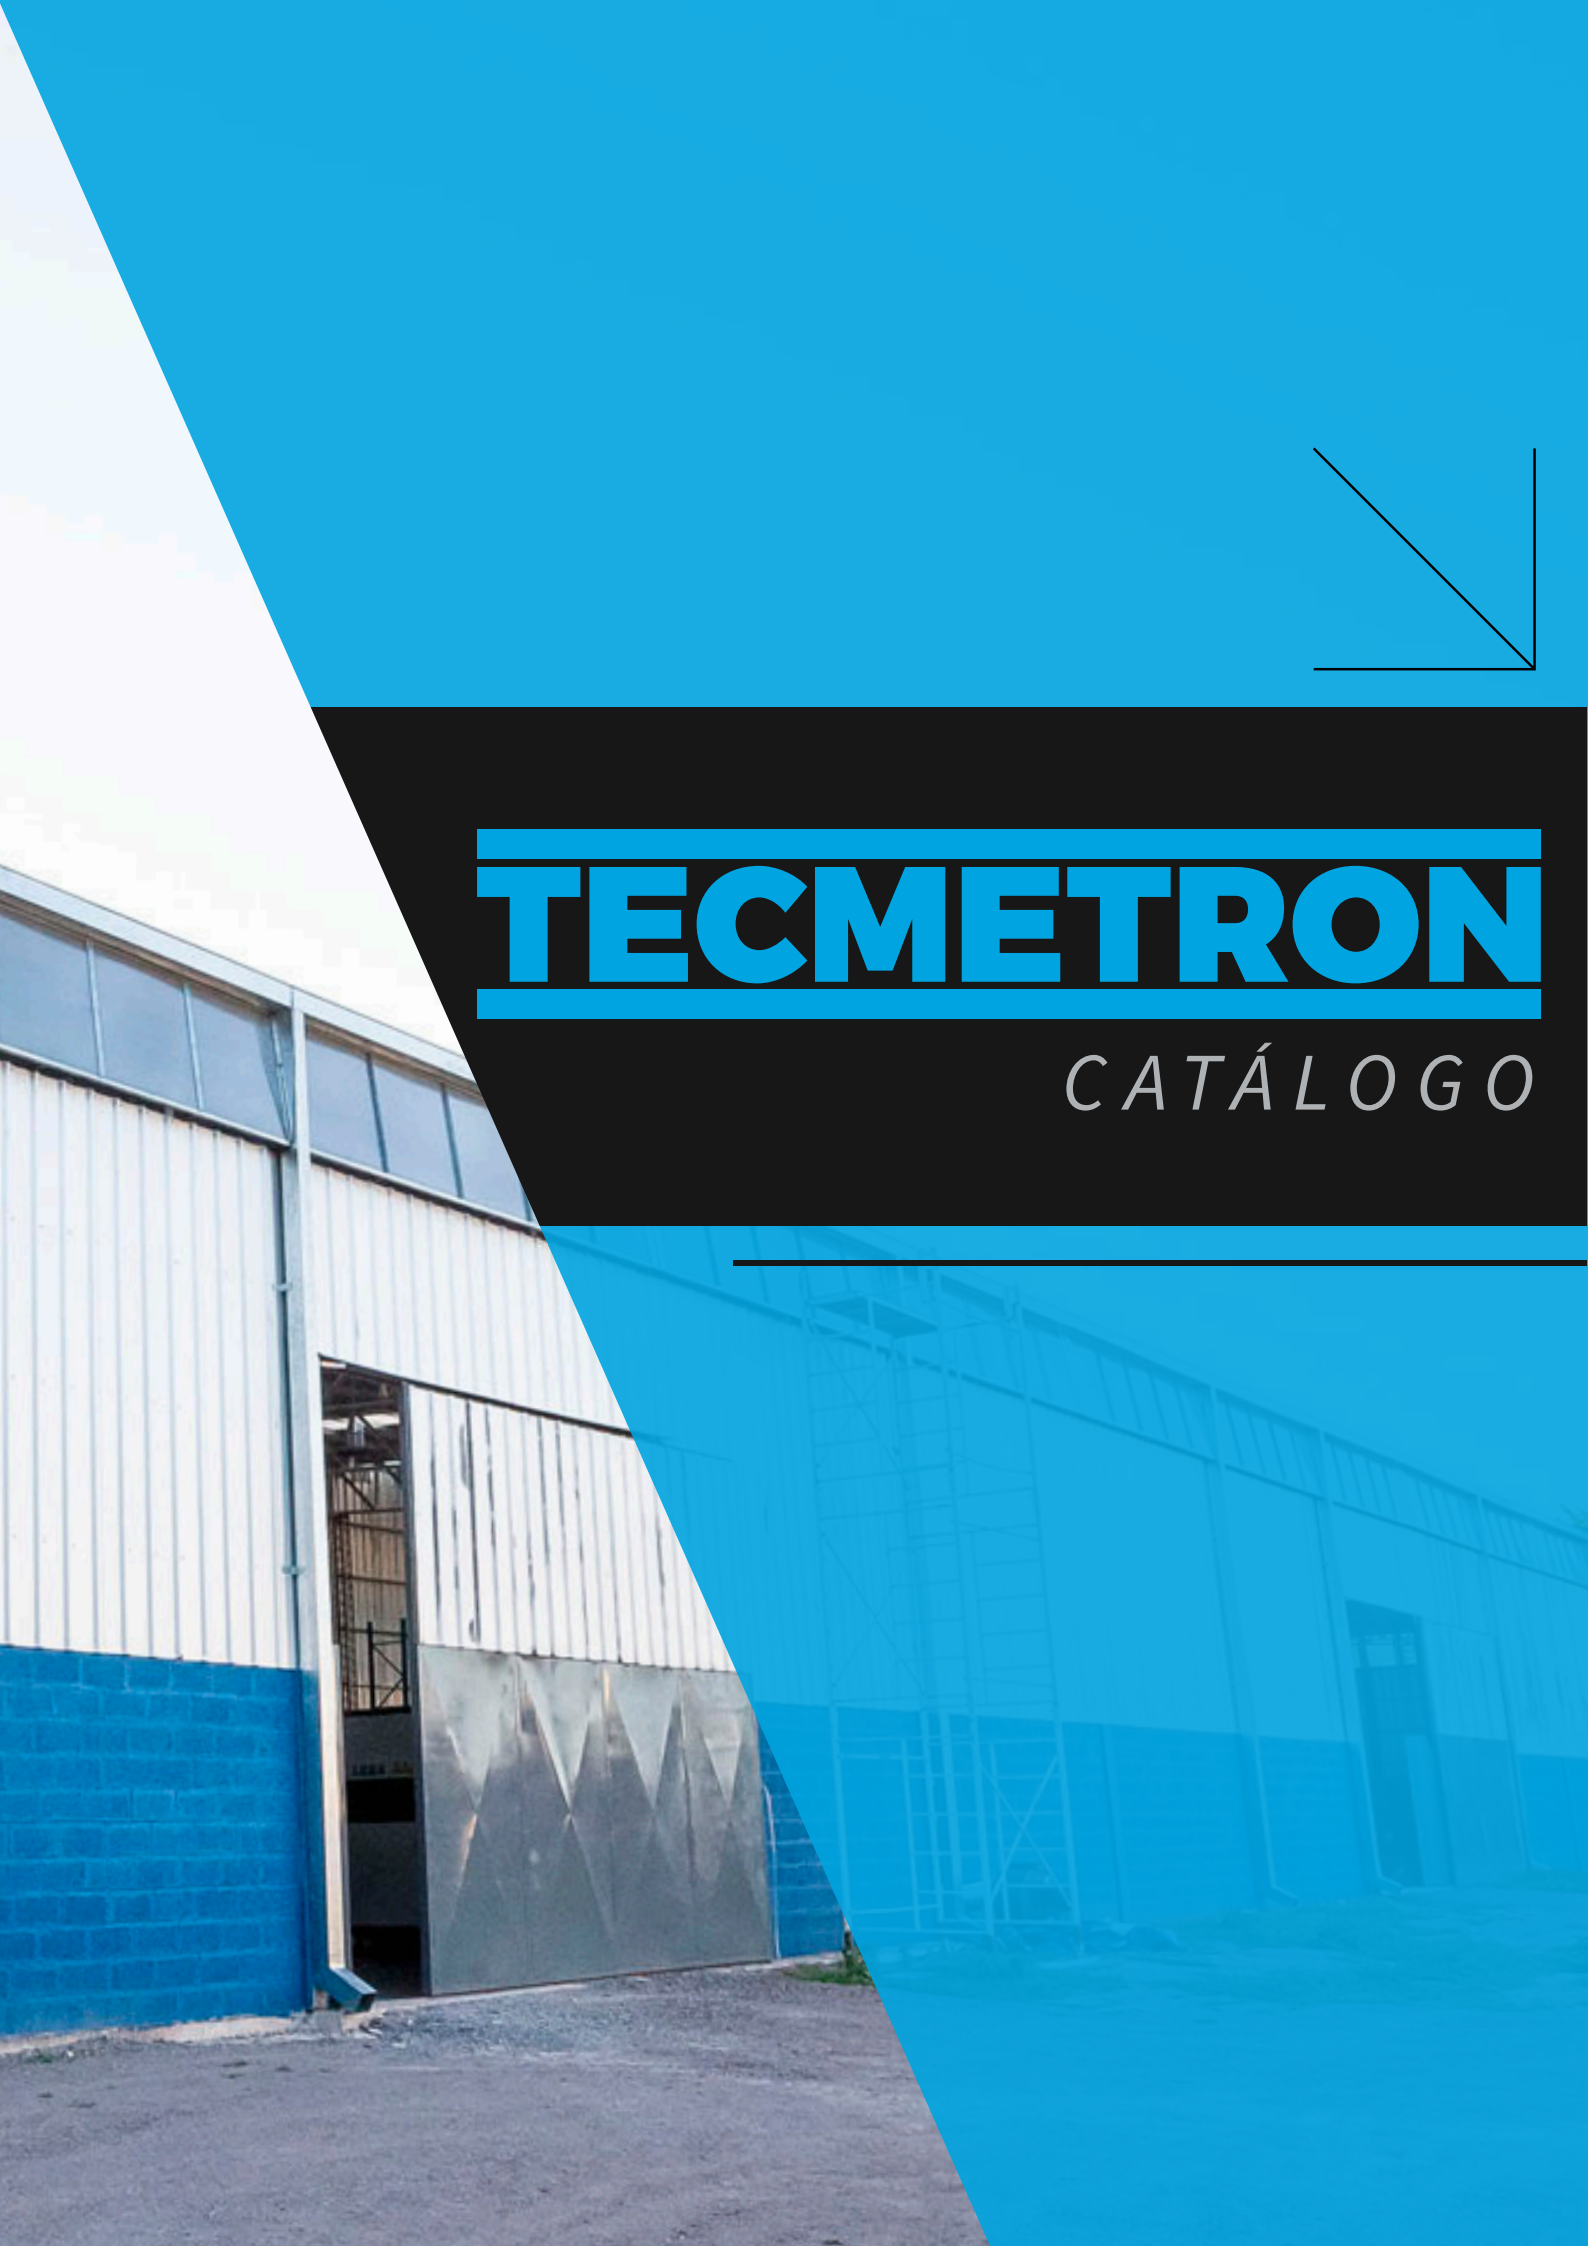
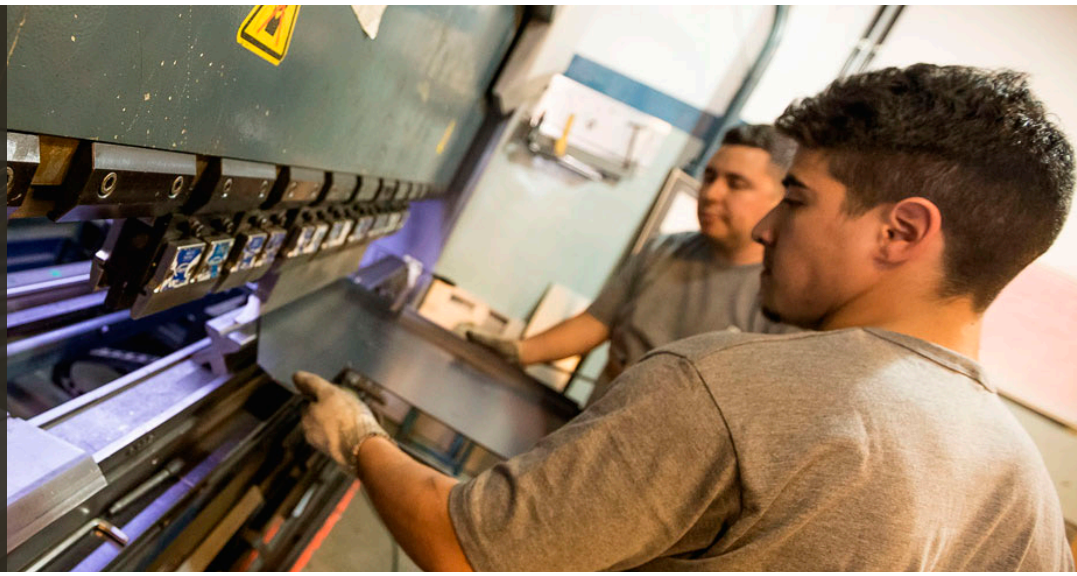
TECMETRON

CATÁLOGO



EMPRESA

Somos una empresa formada por un equipo de trabajo con extensa trayectoria y experiencia en el mercado metalúrgico.



SERVICIOS

Las fachadas de chapa perforada permiten revestir edificios con diferentes opciones de perforaciones permitiendo el control solar pasivo sin perder las visuales exteriores, logrando un efecto de modernidad y sofisticación.

Dependiendo de la estética requerida por el diseñador se pueden agregar distintos tipos de plegados logrando efectos totalmente diferentes. Los módulos son sumamente simples de colocar mediante un sistema encastrable ya sea en forma horizontal o vertical.

En muchos casos son utilizados para reciclar exteriores de edificios donde el costo de refacción resulta muy elevado. También se utilizan como barreras acústicas, control solar y parasoles metálicos.
